

90th-percentile chemical (large gain): Heptachlor epoxide B

fold 4, EPA reference label: positive; gain vs loglinear_interp (mean, folds 1-4): +0.47

curve MAE, median design shown (of 5 designs): NeuroTrajectory 1.85 vs interpolation 2.09; mean of all designs: 1.74 vs 2.21

vehicle SD

median chemical (typical case): DDT

fold 3, EPA reference label: positive; gain vs loglinear_interp (mean, folds 1-4): +0.15

curve MAE, median design shown (of 5 designs): NeuroTrajectory 0.61 vs interpolation 0.90; mean of all designs: 1.24 vs 1.39

vehicle SD

10th-percentile chemical (model loses): Retinoic acid

fold 4, EPA reference label: positive; gain vs loglinear_interp (mean, folds 1-4): -0.12

curve MAE, median design shown (of 5 designs): NeuroTrajectory 2.33 vs interpolation 2.12; mean of all designs: 1.91 vs 1.79

vehicle SD

● measured wells given to the model (k = 3) — NeuroTrajectory forecast (mean) - - - log-linear interpolation
○ held-out wells (revealed) 90% conformal band, k = 3 (pooled)
